software for Windows Category:AutoGUIQ: How can I improve this query I have this query: SELECT id, p.playerid, name, player\_change, playtime, p.lastupdate FROM players p WHERE userid IN ( SELECT userid FROM teams WHERE userid = 6 AND leagueid = 7 AND teamid = 2 ) AND p.playtime > (SELECT MAX(playtime) FROM players WHERE playtime > 0 AND playerid = p.playerid AND userid = 6 AND leagueid = 7) GROUP BY p.playerid and it runs but it takes too long for the large dataset and gives too many records, I'm aware that you can achieve this by having a subquery, but I want to be able to have the original query. Any help would be greatly appreciated. EDIT so if you have a table of players that is like this:

playerid	lastupdate	playtime	userid
1	01-03-2011	ca3bfb1094
