History AutoCAD Serial Key is developed and marketed by Autodesk. AutoCAD Cracked Version was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is a cross-platform CAD package, which means that it can be run on most operating systems: Windows, macOS, Linux and also on other computing platforms like the iPad. With the introduction of AutoCAD LT in 2002, a low-cost and simple CAD system targeted at home users, AutoCAD evolved into an industry-standard drafting package. With the introduction of AutoCAD Architecture in 2016, the brand was extended to architectural design. In January 2008, Autodesk acquired Corel and the CorelDRAW brand was discontinued. Release history Feature and component history In the years before the introduction of AutoCAD, the market leader in CAD software was the software company Dassault Systemes. Dassault Systemes developed the first two commercial CAD packages, the Dassault Systemes D-Edge and D-Systems APC. With the introduction of AutoCAD, Dassault's products were dropped from the market. In response to the new competition, Dassault started developing and manufacturing the Dassault VectorWorks package.

This package was marketed as a professional-level product targeted at CAD users with a large budget. However, VectorWorks was only a standalone package and did not include the other CAD features that were considered core to the AutoCAD package. In addition, VectorWorks lacked the required compatibility with CAD systems from other suppliers. At this point in time, Dassault had the benefit of a lead in the market, which enabled the company to acquire the company Autodesk in 2005. In the following years, Dassault VectorWorks was discontinued and was superseded by the package from Autodesk, the Autodesk Design & Application Suite (DAS) which includes DAS Architecture, DAS Mechanical, DAS Electrical, DAS Fire & Gas and DAS Landscape. Autodesk no longer supports the DAS package, but the core components of the package are now distributed as a separate package called DWS - DAS Components. PostScript was created in 1985 at Adobe Systems, by John Warnock, Robert Sayre and others. The aim of PostScript was to ensure that graphics were not sent through a central host, and that the sending program would be able to recover from an interruption or crash. To avoid an explosion of graphics data, it developed the technology of "page trees" and "Tables of Content". The development of the PostScript language was a joint effort of Adobe Systems, AT&T Laboratories, Hewlett-Packard, Xerox, Sony, Adobe Systems, and SGI. PostScript is a combination of a typesetting program, a page description language, and a page layout program. The language is used for defining the layout and content of documents such as magazines, newspapers, books, Web pages and printed works. As a page description language, it is used to describe the appearance of print documents. The PostScript language also has a machine-independent interpreter, for fast layout and content processing. Adobe Systems refers to PostScript as the "most powerful" page description language in use today. The PostScript page description language was designed as a high-level, generic, extensible and nonproprietary page description language. It has been ported to many computers and printers. Originally developed as a way to rapidly distribute circuit schematics and other technical drawings, PostScript has evolved into a standard for the design and production of documents, such as printed books, magazines and newspapers, using computers. The major PostScript output devices and drawing software include: Adobe Systems: Creative Suite, InDesign, Illustrator, Photoshop, After Effects, Acrobat DaVinci Resolve, DaVinci Resolve Studio Fuji Xerox Xerox: Premiere, Open Servers, Enterprise Workbench Imation: DocuLife, Imation Kyocera Technologies: MicroStation, Impact, Inscape, Vision Xerox: ca3bfb1094
