Generalised dystonia (GD) with parkinsonism-dementia complex is described in three patients originating from one village in Guam. All had progressive dementia preceded by parkinsonism, and all had dystonia affecting the head, face and neck, associated with tremor and bulbar dysfunction. Magnetic resonance imaging in one case showed marked bilateral globus pallidus and a small focal lesion of the midbrain. Features of the syndrome appear to be on the border between Parkinson's disease (PD) and Huntington's disease (HD).Louisiana must allow businesses open to public to be distracted An upcoming court case over the constitutionality of a ban on texting while driving in Louisiana could be a pivotal
