(2016).zip.rar. FMBE FNBK FNGF.. nofilter free 3.32 MB. the epithelial barrier genes \*CGN\*,  
\*SPRR2E\*, and \*TRPM8\* (Fig. [5](#Fig5){ref-type="fig"}a). This is consistent with the finding that  
PBMC's cytokine responses to these epithelial barrier stimuli were impaired in non-BC-derived  
PBMC's with compromised barrier function. In addition, PBMC cytokine responses to stimuli that are  
most likely sensed directly by the epithelial barrier were also impaired in non-BC-derived PBMC's,  
consistent with compromised epithelial barrier function. Furthermore, epithelial barrier function, as  
measured by TEER in an oral epithelial cell line, was found to be consistently decreased in non-BC-  
derived PBMC's, suggesting that cell-cell interactions between PBMC
