It consists of bacteria, organic material and water. Plaque is believed to be the primary cause of periodontal disease. Plaque is colonized by Streptococcus sanguis, Actinomyces viscosus and Actinomyces naeslundii, which are naturally resident in the oral cavity. Plaque is a major source of food for Streptococcus mutans, a bacterium responsible for dental caries. REVIEWS Dental Fluorosis is a disease that is actually quite common in our world. Millions of people are affected by this disease today, but we hardly know anything about it. Some simple things that can be done to protect us from it are also explained in this article. Dental caries have become a common disease, and lots of people consider their teeth to be healthy. But it is really necessary to keep our dental hygiene in mind, and do whatever we can to prevent the problem of dental caries. What is Dental Caries? Dental caries is a disease where the outer surface of the tooth is damaged. If left untreated, this will cause tooth decay. This condition is called as dental caries. So, all the decayed teeth are called as carious teeth. If the damage is severe, it will require the extraction of tooth. Dental Caries Signs & Symptoms When you are suffering from toothache, you will want it to go away as soon as possible. No doubt, the best way to ease your suffering is to use an over-the-counter pain reliever. But, when you are also experiencing a toothache, you should not rely solely on this help. Remember that toothache is really an indicator of a more serious problem. So, you have to be very careful if the pain persists, especially when you are trying to fill in a form. After all, the consequences of missing a portion of a dental form could be grave.
