As you can see above the short_url contains some garbage text. It seems to be output from the program curl -I -s to check if the url was redirected. What I'm trying to do is to remove the short_url and only show the previous part of the url like example.com/profile/stefan. Any ideas how to remove the garbage text and keep only the url? EDIT I tried this so far: string(16) "short_url" string(53) "profile/stefan-charlie-hart-2015-12-11-16-31-22-2012-12-11-16-31-22-12-11-2016-18-27-30-35-23_01-20-51-35-19-26-03-16-59-07-00-15-13-14-19-12_01-25-58-37-02-38-03-27-15-20-54-06-14-20-08-28-23-12-18-22-02-05-01-32-42-32-12-24-24-17-16-06-28-10-42-21-11-28-24-04-06-25-02-01-21-22-06-13-13-03-11-15-26-38-31-15-25-45-22-13-27-40-04-12-30-40-01-15-25-37-11-06-04-33-33-03-19-37-07-24-26-36-12-29-07-44-26-19-16-05-43-31-35-22-11-39-35-31-25-19-41-29-29-19-28-47-02-11-21-42-36-15-04-35-39-07-26-40-01-21-38-35-13-26-30-38-15-23-24-46-04-29-07-42-32-13-36-29-22-39-21-27-17-12-36-11-40-17-36-30-33-29-13-01-31-23-11
