DownloadElectronic devices are in widespread use and in increasing use. These electronic devices often contain sensitive information that must be protected from the general public. Devices that store information must be adequately protected. Often this protection is provided by a physical barrier that prevents access to the sensitive information. This is adequate for devices such as keypads and credit cards. However, many electronic devices, such as PDAs and wireless phones, contain sensitive information, including names, addresses, phone numbers, and credit card information. The current security solutions available for wireless phones are insufficient. Many phones are stolen or lost. Many are lost or discarded in environments where they are exposed to conditions that make them susceptible to theft. One method of protecting information in a wireless phone is to use a password that is entered by the user. However, the password can be easily defeated. A thief can attempt to enter the password. If the password is easily recalled, the thief can easily enter it. A telephone that is lost or stolen may be used to call a store. The store will be able to obtain the information stored on the phone. Therefore, a phone owner must keep track of the password for the phone.

This may be a burden to the owner. USS North Carolina Three ships of the United States Navy have been named USS North Carolina for the state of North Carolina. was a launched in 1918. She saw service in World War I and was sold for scrap in 1922. was a commissioned in 1942 and was struck in 1959. was a commissioned in 1976 and scrapped in 2005.

I'm using IconMounter 0.9 to generate icon files for OS X. I've used IconMounter with the following command: `iconmounter -a -m -s PNG -o foo.icns foo.png` Now I want to know how to set the icon in XCode, I've searched in google but I didn't find any way. What I want is to set the icon for OS X via XCode, it will be useful for me when I have a lot of images and I don't want to generate them all.
