SmartXPS – a feature within AutoCAD allows a CAD user to create a report on a drawing, print it, and email it. The product is part of the AutoCAD Plus suite, and allows the creation of simple charts, tables, graphs, and text reports from within the CAD environment. It is usually called from the print preview or print dialog boxes. The XML format produced by the XPS file can be used for display on any PC running Windows XP, Windows Vista, or Windows 7 and can be exported to other XPS-compliant applications such as the Adobe Acrobat Reader or Acrobat 9. Documents can also be converted to PDF files and printed. AutoCAD Map 3D – 3D is a CAD graphics extension that provides three dimensional views of a drawing. These views are created by placing three dimensional objects such as planes, solids, or two-dimensional drawings such as architectural plans into AutoCAD, generating an orthographic view (three dimensional map with a view from above) of the 3D objects. The result is a 3D architectural visualization of the objects in the drawing. 3D views can be generated using raster images (tiles) or vector images (files with lines). AutoCAD Map 2D – 2D is a CAD graphics extension that provides a two dimensional view of a drawing. This view is created by placing two-dimensional (2D) drawings such as architectural plans into AutoCAD, generating an orthographic view (view with a view from above) of the 2D objects. The result is a two-dimensional (2D) architectural visualization of the objects in the drawing. 2D views can be generated using raster images (tiles) or vector images (files with lines). Graphical User Interface In AutoCAD and AutoCAD LT, the interface is available in three different ways, Windows, Web, and RPD. In addition, each has its own advantages and disadvantages. Windows GUI AutoCAD and AutoCAD LT have a traditional graphical user interface that uses

windows. This is the most intuitive interface and simple to use, however, it is typically slower than the web-based or Remote Procedure call-based interfaces. Web GUI The Web GUI was introduced in AutoCAD 2009. It requires a web browser and Internet access. This interface allows users to open and view drawings without a full installation of Auto af5dca3d97
